

Transform your home

This large detached house has been refurbished to the highest standard to create a stunning home. The building works took approximately 9 months.

The house was reduced to a shell. The garage was then demolished and footings were set out for a new double garage and utility room.

A kitchen and orangery were created totalling a 270 square metre extension to the rear and side of the property.

The upstairs was then reconfigured creating larger bedrooms and en suite facilities. A modern heating and plumbing system were installed and the house was completely rewired bringing it up to the latest standards.

The old roof was stripped and the existing rafters were straightened or replaced. The new roof structure was then tied in to the existing structure. The team then felt, battoned and laid a new roof.

All windows were replaced and all rooms were replastered and painted. The exterior of the property was then rerendered and painted. The front and rear gardens were landscaped and land drains were dug.

What the customer said...

“Tom and his team knew what they needed to do and just got on with it. We lived in the house as the building works were underway with minimal disruption.”
